PROFILE

Since my childhood, I have always wanted to become a software developer because I have been immersed in computers. Despite my interest in software, I did not engage with it much during my early years. I decided to attend a vocational high school because it offered a software program. In high school, I enrolled in the database department, but the education we received was extremely poor, which led to a significant loss of interest in software. Now, I am teaching myself software development.

Since March 2022, I have been focused on Front-End development. I am currently working with HTML, CSS, JavaScript, and React, and I am continuously striving to improve my skills. I take on freelance projects and am eager to learn new things.

SKILLS

Skills: *HTML - CSS - JavaScript - React - SASS - Bootstrap - Tailwind*

LANGUAGES

Turkish: Native Language.

English: I have an B1 level in English and I am continuing to improve it.

PROJECTS

My Projects

All My Projects. My most important projects range from freelance jobs to the ones I've developed myself.

Click the text for my all project on Github.

My First Freelance Job

<https://github.com/serhatcandev/stg-freelance>

I got my first freelance job from a website called Bionluk. The employer sent me a Figma design, and I completed everything entirely (They only asked me to do the Frontend parts in the given task). All the details are available on the GitHub link I provided.

My Second Freelance Job

<https://github.com/serhatcandev/presidential-election-for-turkey-freelance-work>

This is my second job. Just like the first one, I obtained it from Bionluk, and I was provided with a Figma design. I completed everything according to the employer's requirements. I handled everything, including the backend

I have taken on several more freelance jobs, however, my clients do not wish for me to share them. I can say that these are larger projects compared to the ones I have disclosed.

EDUCATION

Nevsehir Mesleki ve Teknik Anadolu Lisesi

2016 – 2020
Nevsehir, Turkey

I studied in the city where I grew up. It was the only school in my city with a software department. Despite having grades that would have allowed me to attend higher-ranked schools, I chose to enroll here
